Head Strap Replacement Offered to Five Million Samsung Gear VR Users

South Elgin, Illinois, January 26, 2017 - Hands Free Headgear™ is offering the five million Samsung Gear VR users an adapter that replaces elastic head straps with a comfortable semi-rigid plastic frame. The adapter totally eliminates pressure on the forehead, cheeks and nose, and is guaranteed by its manufacturer to be the most comfortable head strap alternative available.

The patent pending technology resulted from three years of research by Neal Nelson, a Chicago area computer consultant. "Virtual reality is evolving to include more and more entertainment programming like movies and sporting events. This evolution will accelerate the need for technology that provides a comfortable extended viewing experience." commented Nelson.

--- More ---

"Virtual reality allows travel in a virtual universe from the depths of the ocean to the stars. Hands Free Headgear is working to make that a comfortable trip." said Nelson.

Further information is available on the Hands Free Headgear web site at <http://hfheadgear.com>.

About Hands Free Headgear

Hands Free Headgear was founded by Neal Nelson, a Chicago area computer consultant that has been following, and participating in, the evolution of the computer industry since 1973.
